## **English:**

Hello everyone, I'm Kingston. Today I will briefly introduce the questionnaire survey app I designed, which provides symptom advice for patients with advanced cancer. Taking the iPhone 16 Pro interface as an example, first, the login interface allows users to select language and identity, and different identities correspond to different colors and functions to enhance the user experience. The main page provides a variety of function options. Backstage staff can enter the backstage page through "View Research" to view experimental data and patient symptom information, and can jump to the web version.

The profile page contains basic information such as gender and phone number, and the settings page provides font, language settings and exit options. The core part is the questionnaire page, which includes three types of questions: open, multiple choice and sorting. Users can start a new questionnaire directly or select a specific question type. During the questionnaire process, patients can turn pages back and forth. If they cannot complete it at once, they can return to the homepage to continue later. After completing the questionnaire, the system generates a result report, providing symptom descriptions and medical advice.

In addition, the history function allows patients to review completed questionnaires. Thank you for listening, and welcome suggestions for improvement!

## **Traditional Chinese:**

大家好,我是 Kingston。今天我將簡單介紹我設計的問卷式調查 APP,專為晚期癌症患者提供症狀建議。以 iPhone 16 Pro 介面為例,首先,登入介面允許使用者選擇語言和身份,不同身份對應不同顏色和功能,以增強使用者體驗。主頁提供多種功能選擇,後台工作人員可透過「查看研究」進入後台頁面,查看實驗數據和病患病症信息,並可跳轉至網頁版。

個人資料頁麵包含性別、電話等基本訊息,設定頁面則提供字體、語言設定及退出選項。核心部分是問卷調查頁面,包含開放性、多選和排序三種問題類型。使用者可直接開始新問卷或選擇特定問題類型。問卷過程中,患者可前後翻頁,若無法一次完成,可返回主頁稍後繼續。完成問卷後,系統產生結果報告,提供症狀描述和醫療建議。

此外,歷史記錄功能讓患者可回顧已完成問卷。感謝聆聽,歡迎提出改進意見!

## **Simplified Chinese:**

大家好,我是 Kingston。今天我将简要介绍我设计的问卷式调查 APP,专为晚期癌症患者提供症状建议。以 iPhone 16 Pro 界面为例,首先,登录界面允许用户选择语言和身份,不同身份对应不同颜色和功能,以增强用户体验。主页面提供多种功能选择,后台工作人员可通过"查看研究"进入后台页面,查看实验数据和患者病症信息,并可跳转至网页版。

个人资料页面包含性别、电话等基本信息,设置页面则提供字体、语言设置及退出选项。核心部分是问卷调查页面,包含开放性、多选和排序三种问题类型。用户可直接开始新问卷或选择特定问题类型。问卷过程中,患者可前后翻页,若无法一次完成,可返回主页稍后继续。完成问卷后,系统生成结果报告,提供症状描述和医疗建议。

此外,历史记录功能让患者可回顾已完成问卷。感谢聆听,欢迎提出改讲意见!
